Semester: (Fall, Year:2025), B.Sc. in CSE (Day)

LAB REPORT NO: 2

Course Title: Web Programing Lab

Course Code: CSE 302

Section: 232-D2

Lab Experiment Name: Implement Basic Html (Table).

Student Details

Name		ID
1.	Rukonuzzaman Topu	232002280

Submission Date : 10-21-2025

Course Teacher's Name : Feroza Naznin

Introduction:

In this lab experiment, we created an HTML table to display a seminar schedule. The main focus was on designing the “Tuesday” section of the table, where multiple sessions were arranged with different start and end times. We used HTML attributes like rowspan and colspan to merge table cells properly and align the topics — XPath and XSL Transformations — with their corresponding time slots. This task helped us understand how to manage complex data layouts using HTML tables and improve the visual organization of information.

2. OBJECTIVES/AIM

1. To learn how to create and format tables in HTML.
2. To understand the use of table tags such as `<table>`, `<tr>`, `<th>`, and `<td>`.
3. To apply rowspan and colspan attributes for merging cells and aligning data properly.
4. To design a seminar schedule showing different sessions for Tuesday, including topics like XPath and XSL Transformations.
5. To develop the skill of organizing information in a structured and readable format using HTML.

3. PROCEDURE

1. Opened Visual Studio Code and created a new HTML file named table.html.
2. Declared the basic HTML structure using `<html>`, `<head>`, and `<body>` tags.
3. Created a `<table>` element and added the attribute `border="1"` to make the table borders visible.
4. Used `<tr>` tags to define each row and `<th>` or `<td>` tags to define table headers and data cells.
5. Added a row for Tuesday using `<td rowspan="4">Tuesday</td>` to merge the day name for multiple sessions.
6. Inserted time slots such as 8:00 a.m to 5:00 p.m, 11:00 a.m to 2:00 p.m, and 2:00 p.m to 5:00 p.m in separate rows.
7. Used `<td rowspan="2">XPath</td>` to merge cells for the XPath topic and `<td rowspan="2">XSL Transformations</td>` for another topic.
8. Adjusted cell spacing and padding using inline styles for better readability.
9. Saved the file and opened it in a web browser to check that the Tuesday section displayed correctly with all times and topics aligned.

4.Implementation:

Tables in HTML:

Source Code:

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta name="viewport" content="width=device-width,
initial-scale=1.0">

    <title>Document</title>

</head>

<body>

    <table border="1" align="center"

        <tr>

            <th rowspan="3">Day</th>

            <th colspan="3">Seminar</th>

        </tr>

        <tr>

            <th colspan="2">Schedule</th>

            <th rowspan="2">Topic</th>

        </tr>

        <tr>

            <th>Start</th>
```

```

        <th>End</th>

</tr>

<tr>

    <td rowspan="2">Monday</td>

    <td rowspan="2">8:00 a.m</td>

    <td rowspan="2">5:00 p.m</td>

    <td>Introduction to XML</td>

</tr>

<tr>

    <td>Validity: DTD and Relax NG</td>

</tr>

<tr>

    <td rowspan="4">Tuesday</td>

    <td>8:00 a.m</td>

    <td>5:00 p.m</td>

    <td rowspan="2" style="padding: 7px;">XPath</td>

</tr>

<tr>

    <td rowspan="2">11:00 a.m</td>

    <td rowspan="2">2:00 p.m</td>

</tr>

<tr>

    <td rowspan="2">XSL Transformations</td>

</tr>

<tr>

```

```

        <td>2:00 p.m</td>

        <td>5:00 p.m</td>

    </tr>

    <tr>

        <td>Wednesday</td>

        <td>8:00 a.m</td>

        <td>12:00 p.m</td>

        <td>XSL Formatting Objects</td>

    </tr>

</table>

</body>

</html>

```

Outputs:

Table:

Day	Seminar		
	Schedule		Topic
	Start	End	
Monday	8:00 a.m	5:00 p.m	Introduction to XML
			Validity: DTD and Relax NG
Tuesday	8:00 a.m	5:00 p.m	XPath
	11:00 a.m	2:00 p.m	
	2:00 p.m	5:00 p.m	XSL Transformations
Wednesday	8:00 a.m	12:00 p.m	XSL Formatting Objects

6. ANALYSIS AND DISCUSSION:

In the given HTML table, the `<tr>` tag represents a table row, and this particular row defines part of the schedule for Tuesday. The attribute `rowspan="4"` in the `<td>` tag for Tuesday means that the word Tuesday will span across four rows vertically, clearly indicating that multiple sessions are scheduled on the same day. The cells `<td>8:00 a.m</td>` and `<td>5:00 p.m</td>` specify the start and end times of the seminar for that day, showing a full-day schedule. Additionally, the `<td rowspan="2" style="padding: 7px;">XPath</td>` cell indicates that the topic "XPath" continues for two consecutive time slots, ensuring a neat and organized display without repeating the topic name. The use of `style="padding: 7px;"` improves readability by adding space inside the cell. Overall, this row demonstrates how `rowspan` and inline CSS styling can be used together to create a clear, professional, and visually structured table layout for representing seminar schedules.
